ICIM Endorses the California Right to Know Genetically Engineered Food Act

You have a chance to be a part of history. The California Right to Know Genetically Engineered (GE) Food Act will be on the California ballot this November 6th.

If voters pass the initiative, the GE Food Act will require **mandatory labels on genetically engineered food**. Because California is the largest economy in the United States, it is likely the initiative will lead to **nationwide labeling of all foods containing genetically modified organisms**.

Genetically Modified Organisms (GMOs) or Genetically Engineered (GE) foods have not been proven safe, and the long-term health risks on humans of genetically modified foods have not been adequately investigated. Many small-scale animal studies have connected consumption of GMOs to a host of health problems, ranging from allergies and malnutrition to liver disease and infertility, and many more too numerous to list here.

The International College of Integrative Medicine is a proud endorser of the California Right to Know Genetically Engineered Food Act. That's why I'm asking our members to contribute to the initiative. All U.S. residents can contribute.

Health practitioners must join together to stand up to Monsanto. **Please give today, and please give as much as you can!**

Additionally, **please personally endorse** the California Right to Know Genetically Engineered Food Act at our allied organization's website the Alliance for Natural Health USA.

Sincerely,

Wendy Chappell
ICIM Executive Director
