Gynecological Teaching Associate/Male Urological Teaching Associate Preconference Workshop: ASPE Annual Conference in Denver, Colorado
By: Isle Polonko, New Jersey Medical School

On Sunday, June 14th, the Association of Standardized Patient Educators (ASPE) conference is once again hosting a GTA/MUTA Preconference workshop. This event runs for 4.5 hours on Sunday morning and is extremely comprehensive.

Participants will experience a GTA and a MUTA teaching session from the trainer’s perspective while in the shoes of a student. The sessions will focus on how to successfully and effectively disseminate this sensitive information to your trainers and learners. Additionally, participants will learn about effective program development, the necessity of teaching these sessions from a patient empowerment perspective as well as being introduced to the techniques necessary to achieve this goal. Participants will also learn what sets a GTA/MUTA program apart in terms of high quality and positive feedback from learners.

Additionally, attendees will have an opportunity to participate in a mock Teaching OSCE (TOSCE) utilizing invasive exam rooms - one male hernia, one female breast and one female pelvic room. All materials necessary to conduct TOSCES such as this one will be provided during the mock teaching event including station notes, training notes and door signs. Time is set aside for a question and answer session with experienced GTAs, MUTAs and their program directors and trainers.

This workshop has been very well received in previous years and has been instrumental in launching new GTA and MUTA Programs. The positive feedback from past attendees has been instrumental in the decision to reproduce this important workshop. You can find articles written by prior attendees in the archives of our past newsletters at www.aspenews.org.
