M-K20 soluble

Did you KNOW ?

M-K20 soluble differs from most other potassium products of the same strength by its **scored tablet** and **mechanism of action**; **M-K20 soluble** can be dissolved in water. Therefore, patients who have trouble in swallowing tablets may:

- Cut a tablet in half and take each one separately with a glass of water,
- or
- Prepare an aqueous solution (water) with one tablet in 250 ml of water until full dissolution.

Your SOLUBLE and BREAKABLE potassium solution

20 mEq soluble
Original brand: K-Dur®

FORM: Available in bottles of 100 & 500 tablets.

RECOMMENDED DOSE: Adults:

For the prevention of hypokalemia: Take 1 tablet, 1 to 2 times per day (20-40 mEq, 1 tablet provides 780 mg potassium (20 mEq) from 1500 mg of potassium chloride).

For the treatment of hypokalemia: Take 1 tablet, 2 to 5 times per day (40-100 mEq, 1 tablet provides 780 mg potassium (20 mEq) from 1500 mg of potassium chloride). Take immediately after a meal or with food to prevent too rapid absorption and lessen possible stomach upset or laxative action. Do not crush, chew or suck the tablet. Swallow the tablet whole with a full glass of water. If you are having difficulty swallowing whole tablets, you may try one of the following:

A. Break the tablet in half, and take each half separately with a full glass of water.

B. Prepare an aqueous (water) suspension.
(See product label for instructions).
