

*Karen Szauter's Article Pick of the Month*

Dr. Karen Szauter, from the University of Texas Medical Branch in Galveston, is a self-proclaimed *research "geek"* who is very passionate about disseminating research related to SP methodology in hopes of encouraging further research and advancing the field. Karen trolls more than 20 medical education and other journals from around the world, reading over 400 articles a year, in search of publications "worth having a conversation about" to share with the ASPE community.

As part of her role on the Grants and Research Committee, Karen Szauter will highlight in ASPE – e- News a "Pick of the Month" publication for ASPE members to read and disseminate.

This month's Szauter pick is a systematic review that covers 20 years of publications related to OSCEs in psychiatry. We hope you enjoy this retrospective.
