

Dear SFC Design Community,

Did you know that over 90% of furniture consumers would prefer that their furniture purchases be environmentally safe? Designers are at the interface between consumers and manufacturers, placing them in a unique position to educate and inform clients and pass those preferences on to manufacturers.

I am asking you to participate in a [survey](#) from the Sustainable Furnishings Council (SFC) that will help us to create educational resources and materials specifically to serve interior designers in helping consumers find the healthy furnishings they desire. I want to hear directly from you so that the SFC can create the most effective educational resources and materials for designers today.

The dual mission of the SFC is to help companies and professionals in all segments of the residential furnishings industry reduce their environmental footprints, and to help consumers find the healthier furnishings that they prefer. To that end, we are collecting information on the current level of understanding about the handful of hazardous chemicals that are most commonly found in furnishings.

Could you take the time to complete this 8-minute survey by September 30 so that the Sustainable Furnishings Council can move forward with this educational project to serve you?

Upon completion of the anonymous survey, you'll receive a link to a succinct summary of five classes of harmful chemicals commonly found in home furnishings products. You may also choose to be entered into a drawing for either a 1-year [Sustainable Furnishings Council Membership](#) (a minimum \$275 value) \or for a seat in the SFC's [GREENleaders](#) certificate course (a \$299 value).

Please follow [this link](#) to participate right now or save this email to return later. Remember, the survey deadline is the end of September.

We value your input!

Sincerely,
Susan Inglis

Executive Director, SFC

P.S. We invite you to check out our website: sustainablefurnishings.org, where you will find valuable information and resources about healthy home furnishings.
