

# AAFP Website Security Enhancement

---

Late this week, a security enhancement will be implemented on the AAFP website to keep security systems up-to-date for members, chapter staff, and other website users. The process will ensure that all personal information including name, home address, email address, and member ID is protected.

After the security update is completed, all current website users will be prompted to create a new password the next time they log into the AAFP website. The process is simple, fast, and similar to other website security measures. The new password must contain at least eight characters with at least one uppercase character, one lowercase character, and one number. Each user will also be asked to set up a security question and response.

All members who have an email address on file will be notified when this new system is in place. The AAFP Contact Center will be available to answer any questions or provide assistance to members on this new system, and can be reached at [contactcenter@aafp.org](mailto:contactcenter@aafp.org) or (800) 274-2237.
